

# A large instrument for population neuroimaging

Jean-François Mangin

ICPerMed workshop, Siena, 2023

## Deep phenotyping

Push MRI technology to the limits

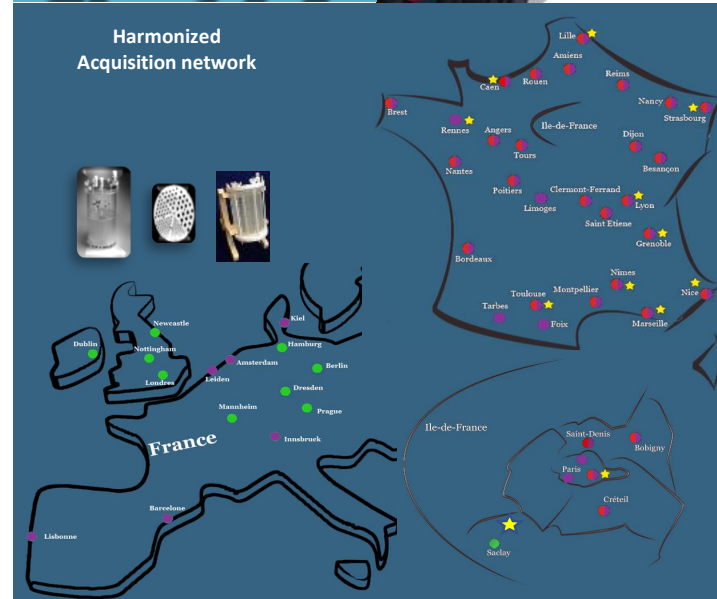

Clinical 11.7T  
(World record)

5000 acquisition  
hours (C. Poupon)

## Wide phenotyping

Push the size of the clinical research datasets

Neurospin is the nest of

# Let's imagine a medical consultation of the future

The doctor has access to an extensive library of medical records

He looks for similar patients in the records of the past

## The nearest neighbors strategy

New patient

# First request leads to a subset of similar patients

# The doctor has access to the patient's care path

Therapy A

Therapy B

Therapy C

# The doctor finally gets some support

## Therapy A

## Therapy B

## Therapy C

Decision support:

Therapy A is the most efficient

Outcome of therapy A can be predicted with a missing biomarker X

Ask for additional exam

# Nearest neighbors after complementary exams

## Decision support

Chances of success

1. Therapy B
2. Therapy A
3. Therapy C

Which metrics?  
Standardisation  
required

Which neighbors?  
Stratification

# A very large instrument for the neuroimaging of cohorts

Built in the context of a cohort dedicated to the natural history of AD (2300 subjects)

Kick-off grant (2011-2015) : 9 millions € for 5 years  
**To make multicenter neuroimaging affordable**

Now a pay for service business model  
+40 funded projects supported: AD, Parkinson, ALS,  
Bipolar disorder, Schizophrenia, prematurity, neuro-oncology, etc.  
+10000 subjects already collected (15000 MRI, 5000 PET)

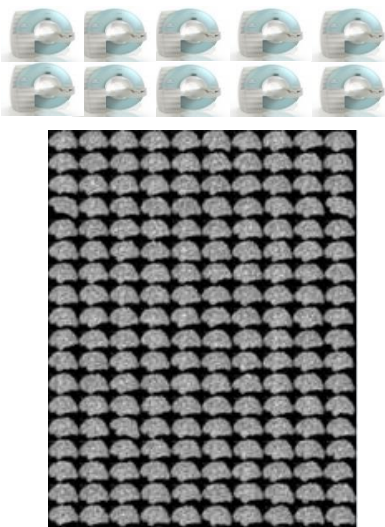

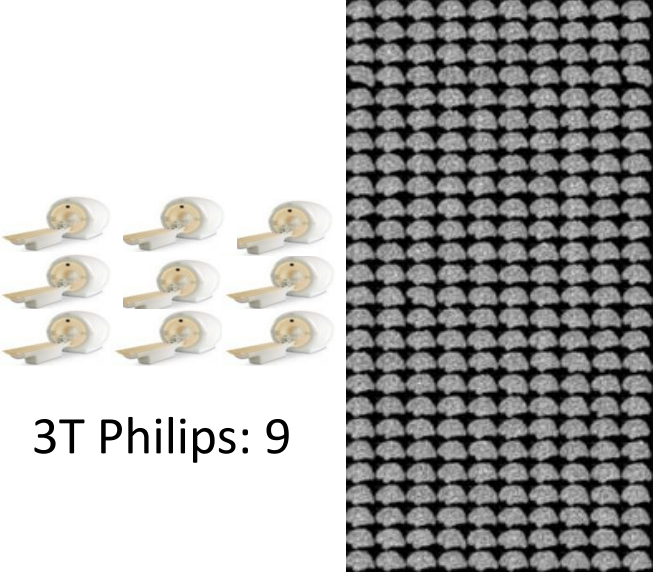

# MRI network for MEMENTO cohort

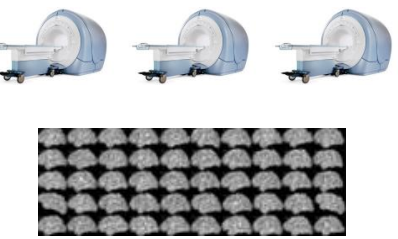

3T GE: 7

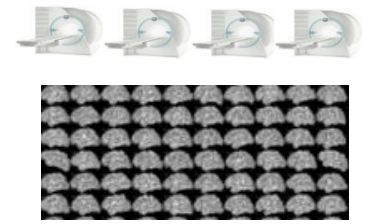

3T Siemens: 10

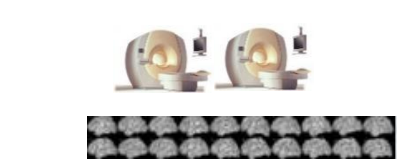

3T Philips: 9

1.5T GE: 3

1.5T Siemens: 4

1.5T Philips: 2

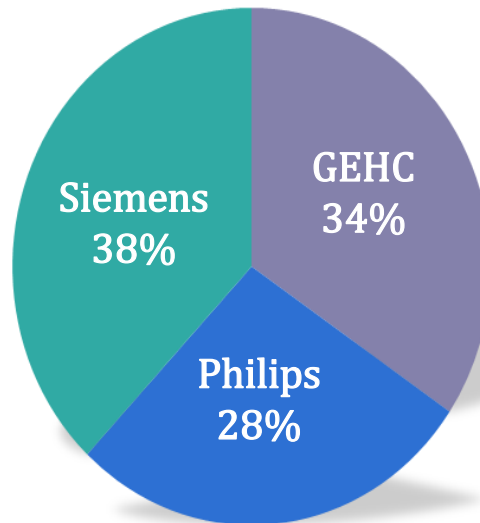

# PET network for MEMENTO cohort

29 MACHINES....

Modèles	Année Installation	Nombre Sites
Discovery 690	2011	1
Discovery 690	2010	1
Discovery 690	2009	1
Discovery RX	2009	2

Modèles	Année Installation	Nombre Sites
Gemini TF	2010	1
Gemini TF	2008	1
Gemini GXL	2006	1
Gemini GXL	2005	1
Gemini Dual CT	2004	1
Gemini GXL	2003	1
Gemini Dual CT	2003	2

# One subject, 100 machines, 500 acquisitions (1T to 3T)

## Brain volume

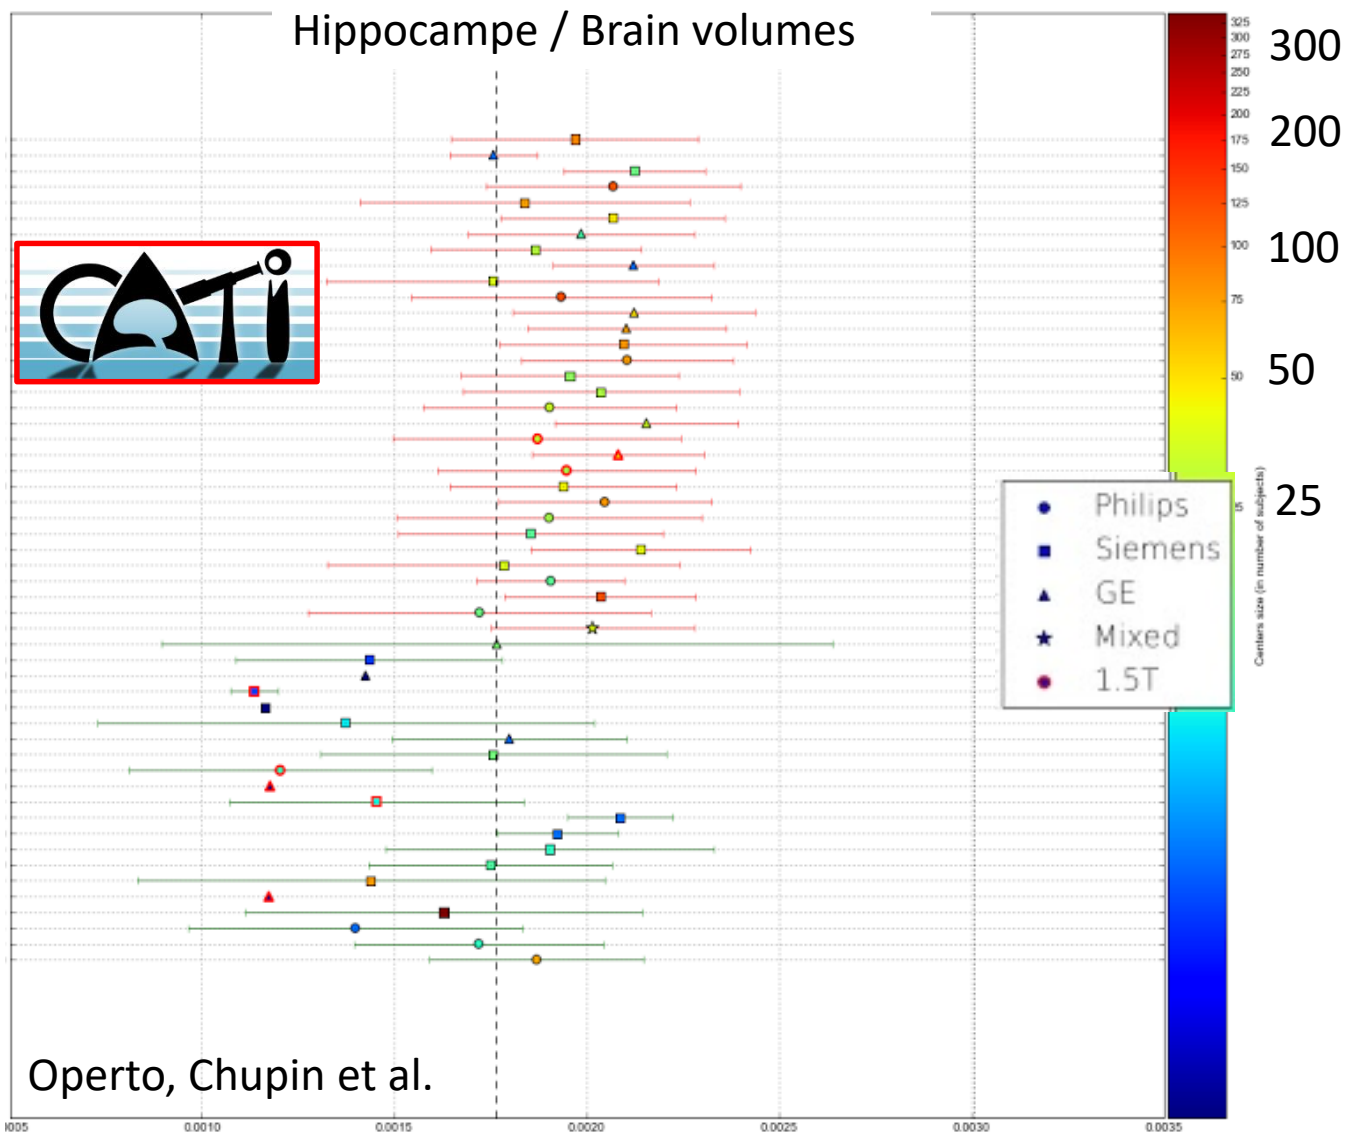

## Hippocampus

A standardisation issue ?

# A must for multicenter imaging: standardisation

Early MCI subjects  
CATI harmonisation

Alzheimer and MCI  
patients  
Light harmonisation

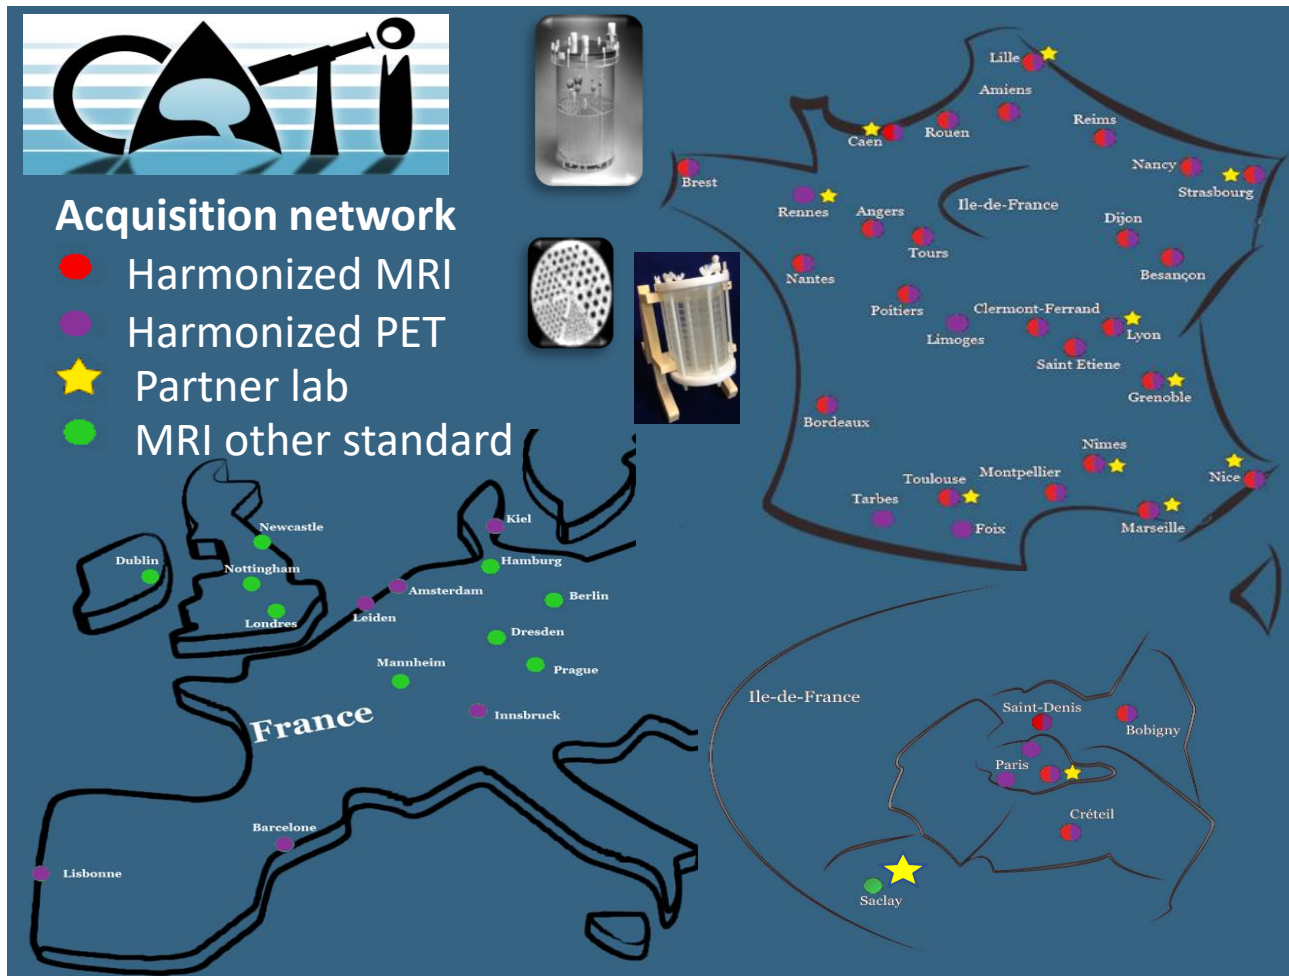

# A large instrument for population imaging (14 years old)

Support of more than 40 French and European clinical studies

A wide dataset to feed machine learning

Pathology	Study number	Subject number
Alzheimer's disease and related dementias	18	8000
Parkinson's disease and related dementia	6	2500
Huntington	3	200
Hypertension	1	800
ALS	1	1000
Psychiatry	5	3900
Aging	2	2400

# Data acquisition and analysis, quality controls

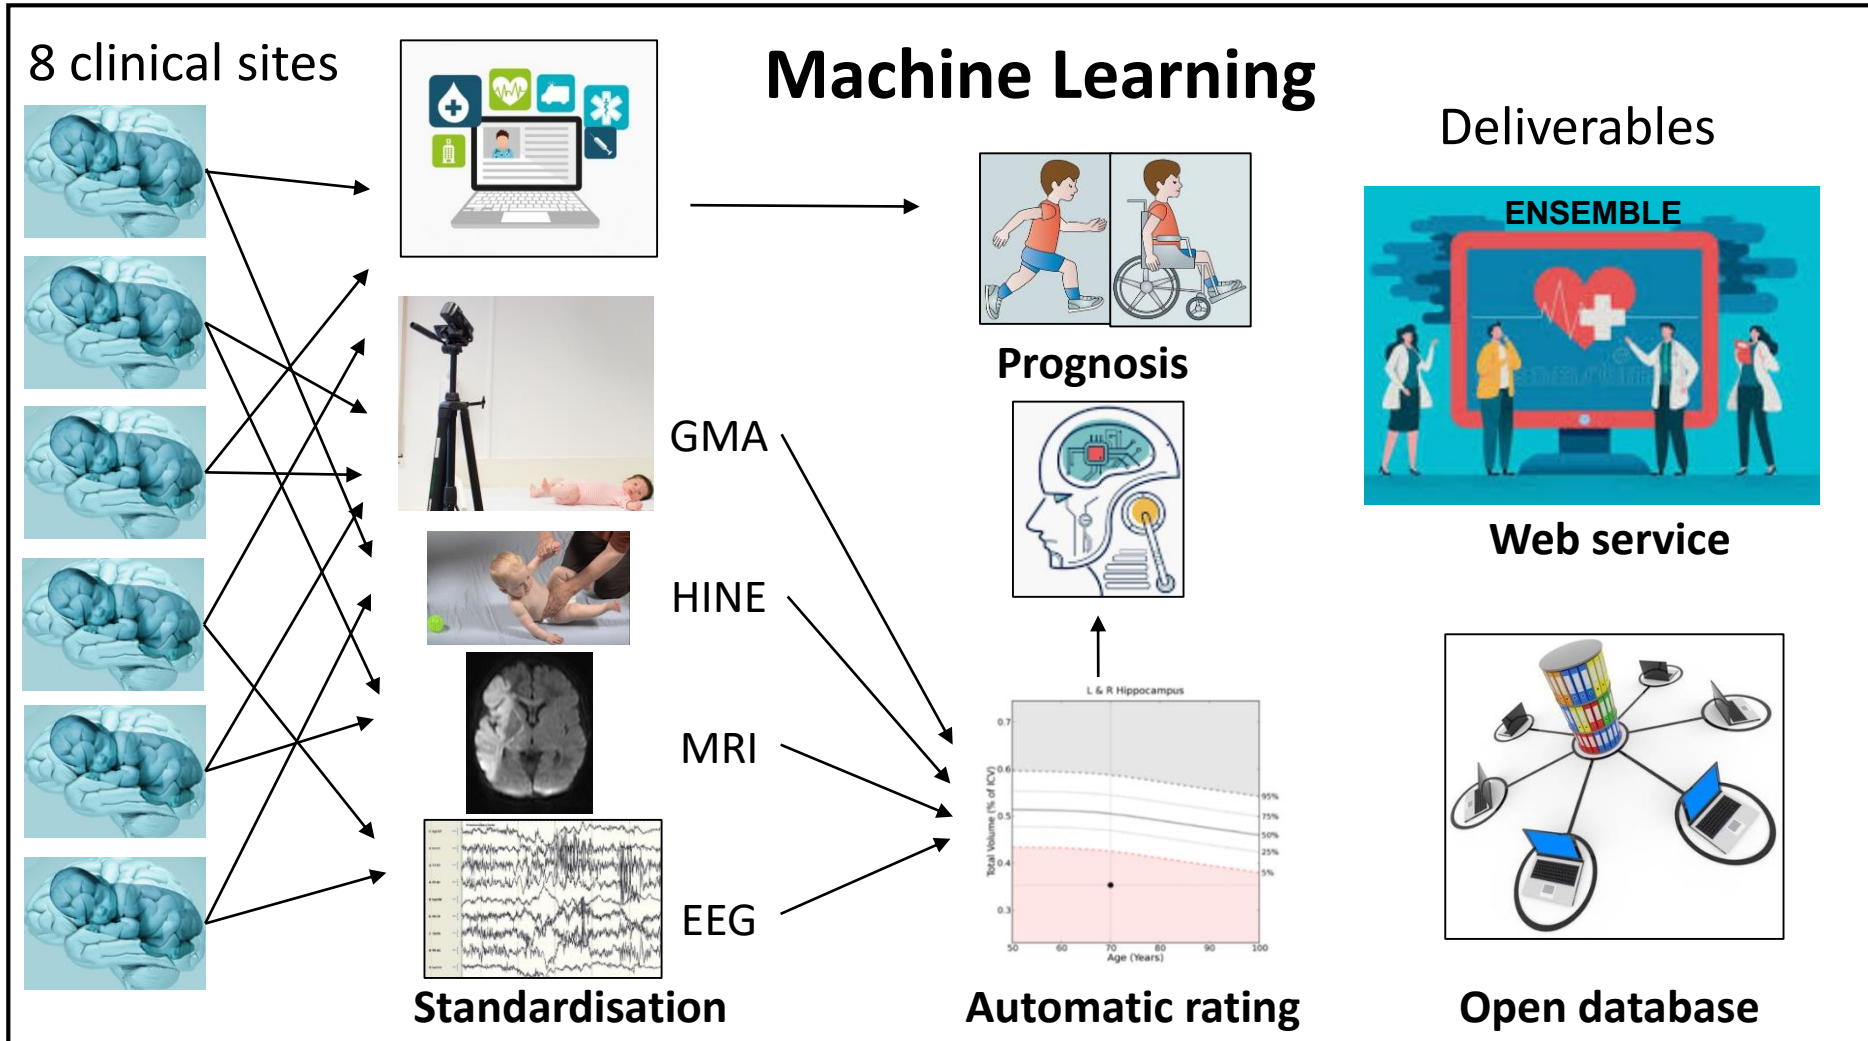

# ENSEMBLE: a typical project supported by CATI

## Predicting outcome in infants at risk of Cerebral Palsy

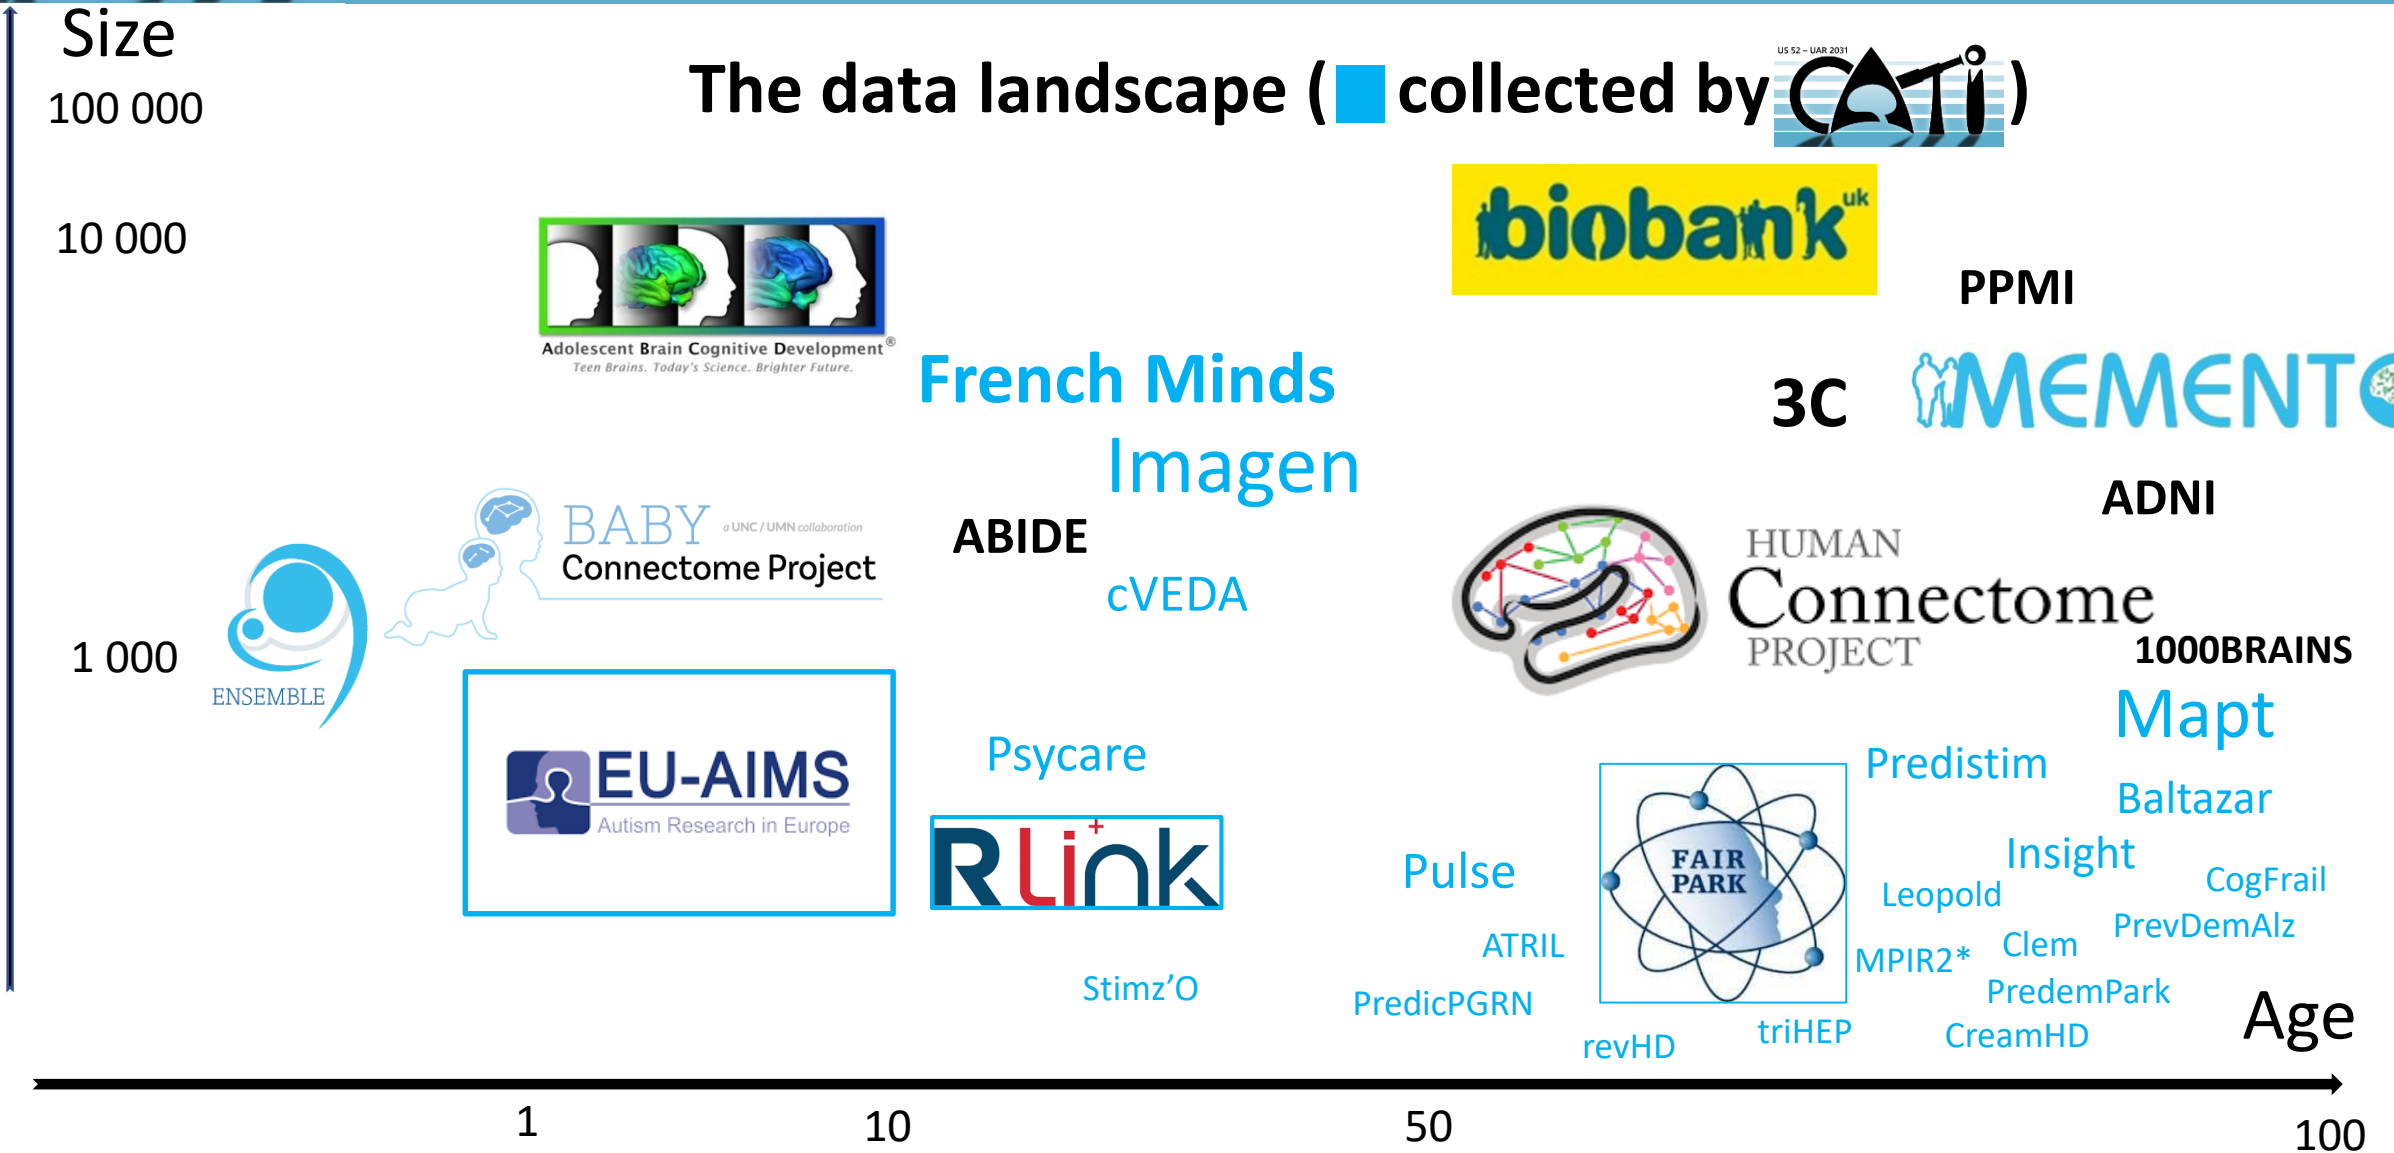

# Harmonizing CATI's database with other datasets via algorithmic approaches

+ Setting standards in routine care

## The data landscape (■ collected by CATI)

# Federated organization required (GDPR)

# CATI's French Ecosystem to be extended to health care system

## Public organizations:

## Imaging societies

## Research networks

## Public sphere:

### Clinical research

### Public platform

Support PHRC, ANR,  
European project, etc.

National database,  
Big data, Biomarkers

### Labs

## Private sphere (2 markets)

# The vision for the future

- **Push acquisition standard to routine care** compatible with normative scales and ML-based predictors from research, dedicated web service
- **Reinject routine care data into the research circuit** to refine stratification, correct sampling bias in the research population, monitor sensor evolution, etc.
